Team 1 follow-up
Safety officer - Adrian Podpirka

This was the initial result
Crufts electronic lab - everything was ok. All safety protocol was accounted for.

Hau group Lab - For the most, everything was fine except for the 1st floor lab space where there was a power outlet with no GFCI near the sink. They told me they would cover those outlets until it would be fixed. There were improvements from last years safety inspection, namely segregation of chemicals (acids, bases and solvents) as removal of temporary extension cords.

-------------------------------

Follow up showed problems fixed in Hau Group Lab.
