Team 6 Follow-up report  
Manoharan lab – Anna Wang

1. Not enough room in the SAA, so waste was being stored in the cabinet next to it. Even if there was enough room, the acidic and basic waste couldn’t be stored together. Acidic waste was in the SAA, while basic waste was in the cabinet. The cabinet also contained virgin basic chemicals.

This is a space issue. We had previously asked Howard Herman-Haase for advice; he has inspected the lab and we are awaiting his recommendations.

2. Empty glass containers were on the floor. Planned to use them as waste containers, but there’s not enough room in SAA for the empty containers.

We have removed these bottles.

3. Cords were hanging in front of the fume hoods. Need to be moved or attached to the side of the fume hoods.

We are in the process of removing equipment with cords that we don't usually use, and moving the rest of the electrical cords to the back of th
