Pierce 100F AV Instructions

Center projector (projector 1)

To turn on the center projector

1. Look for the Extron Center Projector Control panel at the front of the room and press & hold the “Laptop 1” button (or Laptop 2 button if using the side wall connection).

2. Press & hold the “Display Power” button. The projector will slowly power on and the screen will descend from the ceiling.

3. There are 2 VGA computer connections to the center projector.
   a. “Projector 1, Laptop 1” is in the front corner on the sidewall below the Extron panel buttons. This connection is for video and audio connection to the room sound system. There is a black VGA plus audio cable connected to this input.

   b. “Projector 1, Laptop 2” is in the middle of the sidewall on the column near the floor. This connection has video and audio connection to the room sound system. There is a cable connected to this input. You will need to press the Laptop 2 button instead of Laptop 1 on the Extron Center Control panel, before pressing the Display Power button.

** When finished, please turn off the system by pressing and holding the Display Power button till the projector image disappears and the screen rises **
